

SmartStock AI

**AI-Powered Demand Forecasting &
Smart Inventory Optimization**

Retail intelligence, simplified.

The Inventory Challenge

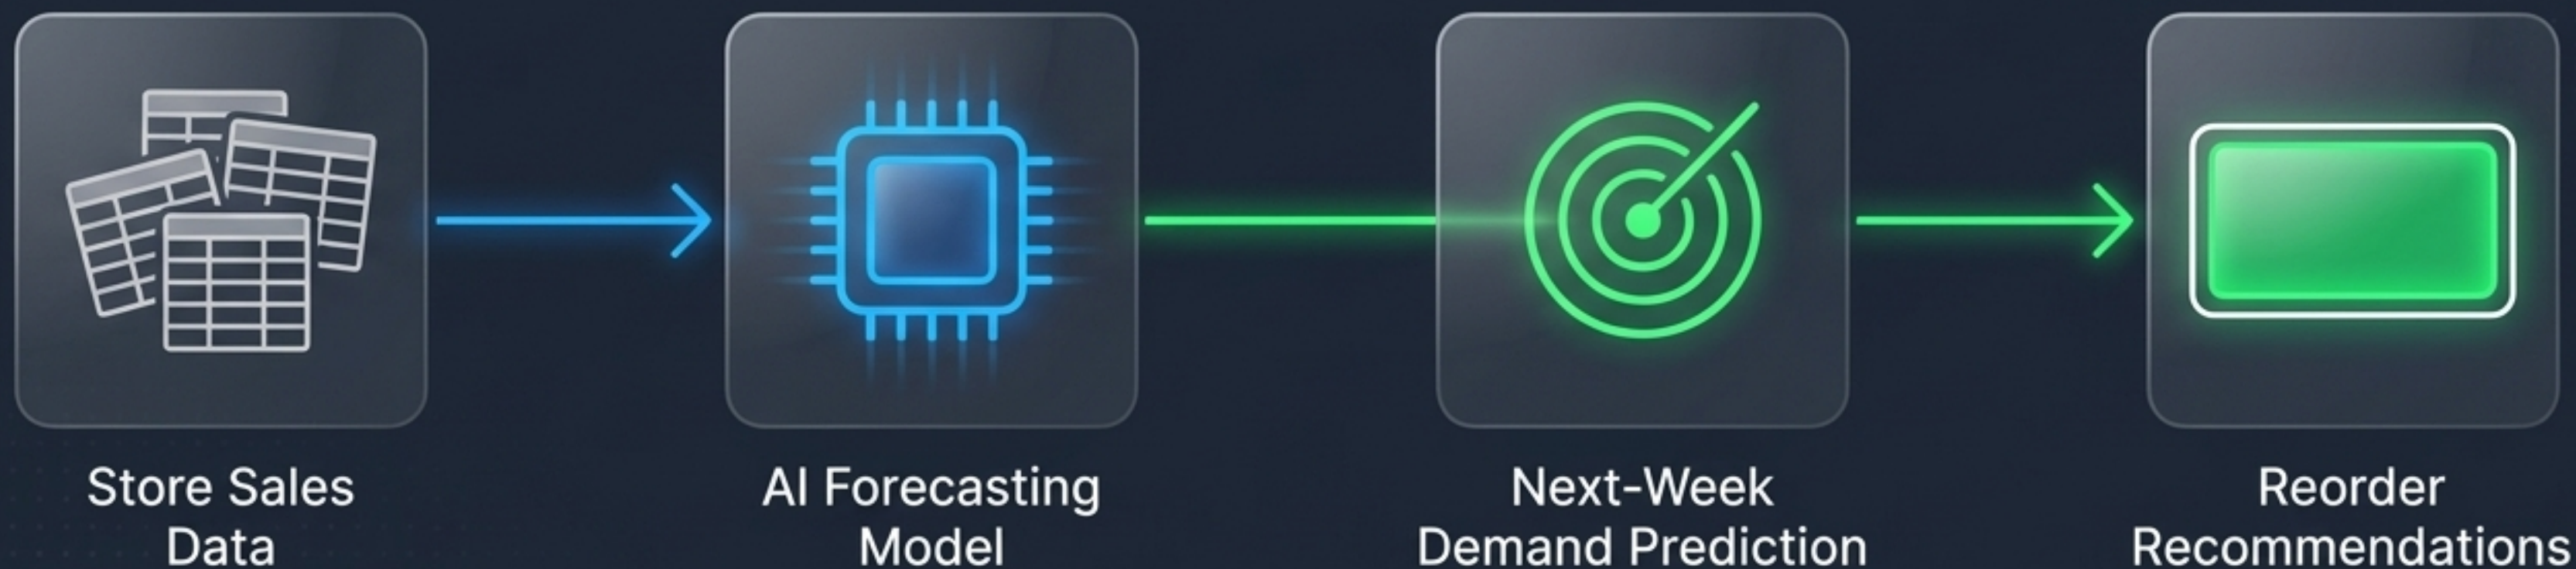

Overstocking locks money in slow-moving products.

Stockouts cause missed sales and unhappy customers.

Inventory stocking has a major problem of overstocking products that are not likely to sell next week. Store managers need a better way to predict upcoming demand.

Demand Forecasting for Better Stock Decisions

SmartStock AI takes store sales data as input and predicts the most likely products to sell next week. This helps stores reduce excess inventory and prioritize products at risk of stockouts.

Seasonal Demand Spike

April + Ramadan + Eid

Sales demand can change drastically during important events and seasons. This dual awareness helps stores prepare stock before seasonal demand increases.

Ask Questions About Your Inventory

Step 1

- Which 5 items need immediate restocking?
- How will upcoming holidays affect dairy category sales?
- Generate a supplier purchase order summary for top sellers.

Step 2

FAISS Vector Search:

Querying your specific Store Data (Forecasts + Inventory)

Step 3

Groq AI: Translating data into plain English advice.

The RAG assistant answers questions using the store's own forecast and inventory data. Every answer is strictly grounded in relevant product, stock, and forecast information.
